

# Klamath National Forest

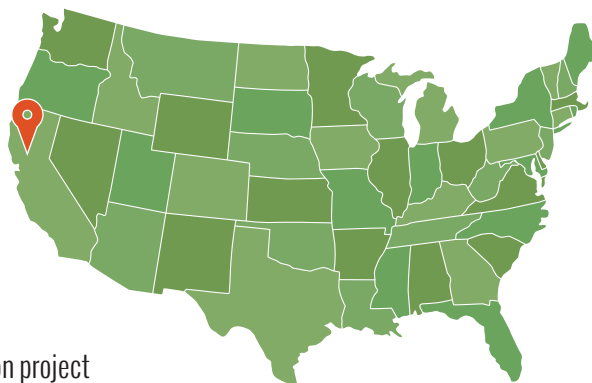

NORTHERN CALIFORNIA

## REASON FOR PLANTING

## PROJECT HIGHLIGHTS:

- February-March 2018 planting timeline
- 30,000 trees funded by Enterprise
- 12th year working on a California restoration project
- More than 2.3 million trees planted in the state of California through our partnership

Five years of wildfires have crisscrossed this forest, leaving behind a charred landscape struggling to recover. Replanting is critical to provide slope stability and restore habitat for the northern spotted owl and the endangered coho salmon.
