

PROJECT HIGHLIGHTS

May

2019 planting timeline

100,000

trees funded by Enterprise

4th year

planting in the state of Minnesota

More than 500,000

trees planted in Minnesota

PROJECT PROFILE: 2019

Chippewa National Forest, Minnesota

REASON FOR PLANTING

Chippewa National Forest has faced many issues in recent history, including strong wind events, insects, and disease. The result is an acute need for reforestation. Replanting efforts will reestablish native tree species and provide essential habitat for area wildlife including the American bald eagle.

Restoring forested watershed areas that were wiped out by straight-line winds, insects, and disease

Providing critical habitat for wildlife, including American bald eagles

Improving forest stand resilience to climate change
